IMPROVEMENTS WE'RE WORKING

Updated: March 2001

The DLIS Environmental team is currently working on the following improvements to the ERLS software application. Therefore, if you find a software function that appears to have a prob-lem, or you have a suggested improvement, please check the following to ensure that it is not already identified. If not listed then contact the CLIS Customer Service Office for assis-tance.

ADMINISTRATION

INSTALLATIONS

R-037-98

COMMAND/REGION USER ID BEHAVIOR. The Command Region field behaves badly on the Activity Ma n-agement screen for User IDs at the Installation and Activity while behaving OK for User IDs with a sys admin level of access. These problems were discovered while investigating problems trying to add Activity information during IOC testing. I was trying to add Activity data but didn't think it was being saved to the database. I believe it was added, but wasn't visible because of Command Region problems.

DSCR Installation level.
When you double-click on any Activity on the Activity Management screen to select it, the Command Region field is not being populated.

If you want to add a new Activity on the Activity Management screen, the Command Region drop down list only displays the Command Region that the host Installation has been assigned to. This prohibits you from adding most type of Activities since they will usually need to be assigned to different Command Regions than the host Installation. All Command Regions should be displayed on the drop down list.

DDRV Depot level.
Since this is an Activity level User ID, only DDRV is displayed on the Activity Management screen. This is fine, but when you double click on it to select it, the Command Region field is not being populated and is inactive. It should have displayed DDC.

If you then click on the Clear Button and type anything in the Acronym field of the details area, the Command Region drop down list will activate, but displays only the Command Region for the Host Installation (DLAC) rather than for DDRV (DDC).

You can add new Activities from this level without also entering a Command Region. The Command Region field remains inactive unless you first click on the Clear button, in which case it only displays the Command Region for the host Installation (DLAC) in the drop down list. If you do add a new Activity without a Command Region, it will not be visible to you on this level, but is visible with a User ID at Installation level (or sys admin level). Since a user at an Activity level shouldn't be trying to add new activities anyway, the Add button probably shouldn't be active in this instance. (Many DRMO users will need to add off-site (generator) installations and activities, but they will do so with the new "super DRMO user" option in Security.)

R-065-98

INSTALLATION MANAGEMENT EXPANDED SEARCH. When you do an expanded search for Installation Management that returns pretty much all installations, and then select one of the installations from the Installation Selection List, the details for the selected Installation are displayed on Installation Management. However, unless you selected an Installation from the first block of records in the selection list, the Installation Management screen is pretty much locked up; none of the push buttons work. You can minimize the window, then reopen it, and the buttons do all work. This problem doesn't occur if you pick an installation from the first block of records returned to the selection list. No screen prints are attached. It's one of those " you have to try to see it" things.

R-067-98

THE "+" BUTTON ON TRANSFER SCREENS. For Installation, Activity and Function/Process Transfer screens, the [+] button does not work properly for any of its occurrences. It will not work when scrolling down a drop down list and then clicking on it. It only works when the associated named field is blank and (in most cases) hig h-lighted.

R-118-98

DISPLAY PROBLEMS - ACTIVITY MANAGEMENT SCREEN. We seem to be having difficulty displaying the Command Region on the Activity Management Screen. For the most part, this seems to be a problem with low level User Ids, but does exist to some extent with Sys Admin level User ID s also.   We also seem to be having a problem displaying the Command Region on the Command or Region Management screen for some low level users.

R-013-99

DAISY RIC+1 CODE. ERLS is not allowing entry of the same DAISY RIC+l Code for different activities and with different DAISY Site Codes and acronyms. We have planned to add DRMO off-site locations as Installations. We then will establish a responsible DRMO as an Activity under such an Installation with a variation on the DRMO acronym and name. The problem is that ERLS won't let us assign another DRMO activity with the same RIC+l. The combination of Acronym, RIC+l and DAISY Site Code will be unique so ERLS should let us assign the same RIC+l more than one time. We believe this problem originated when the DASY Site Code SCR was implemented. This SCR moved the DAISY Site Code down to the Function Process level.

R-036-99

UP/DOWN ARROW FUNCTIONS.

- Installation Selection Screen: After using arrows to go to bottom of list, both arrows become inactive.
- Transfer Function Process: Unable to activate up arrow.
- Chemical Balance Report: Down arrow is available but not functional. No up arrow.

R - 162 - 00

INSTALLATION SELECTION LIST (DEII1001). After entering a wildcard, %, in the Installation Acronym Field on the Installation Search Criteria screen, ERLS took me to the Installation Selection List. I found that I could page past the last record using the more records arrow but I eventually got a blanked out field on the List screen that I shouldn't have. On the List screen the up and down arrows are no longer active (see attached screen print) so you are also unable to page back up into the list. Instead, I had to hit the cancel button to return to the Installation Search Criteria screen.

R - 163 - 00

INSTALLATION SELECTION LIST (DEII1001) The select button on this window is active when it should not be. The select button should not be active until a user highlights an entry in the List box. I found that when I hit the select button without highlighting and entry that an application error is returned (TIRM030E: Application failed - Updates have been backed out...). This works the same

when Expanded Search is used.

R - 167 - 00

INSTALLATION MANAGEMENT (DEII1001). Found the Address icon wasn't enabling as expected although the data for the installation being used had just been entered.

R - 231 - 00

ADMIN, INSTALLATION MGMT (DEII1001). The Installation Selection List screen has been revised to include the facilities for the Vertical Scroll bar and the More Down and Previous Up Arrow Keys. The Program Status Line displays the message 'More Records Have been Retrieved Than Appear in List - Use + Button to display'. The Program Status Line should be revised to be consistent with other Bld 2 screens with the same facilities. Suggest revising the message to 'More records have been retrieved than Appear - Use Up/Down Arrows to Display.'

R - 237 - 00

ERLS ADMINISTRATION: INSTALLATION MGMT (DEII 1001). Expanded Search: Installation Selection List (DEII1001). The user is unable to double click on a record as a method of selection.

R - 003 - 01

MSDS INFORMATION MANAGEMENT (DEMM 1001). I could successfully add a new local non-radioactive MSDS with an HCC of B1. However, when I attempted to modify the record Trade Name I received a msg stating, "HCC for Non-radioactive MSDS is invalid – First position of HCC may not be "A". I should not have gotten the msg because I created the new MSDS with an HCC of B1. If I chose B2 I also got the same msg. But when I chose C1 the modification was accepted.

ORGANIZATIONS

R - 233 - 00

ADMINISTRATION: ORGANIZATION   COMMAND AND REGION MANAGEMENT (DEOC1001). When an unauthorized user clicks the ADD, MODIFY or DELETE button, an ERROR box is display stating their unauthorization. The Program Status Line displays an appropriate message. When the same unauthorized user clicks on the TRANSFER button, only the Program Status Line displays the inability to Transfer. This User is suggesting an Error Box to be consistent with the other functions of the screen.

REPORTS

R - 094 - 00

ADMINISTRATIVE REPORTS. PM and DSIO agreed that reports would not be available until after ERLS Release 3.0.

TABLES

R - 177 - 00

TABLES - DOD ACTIVITY ADDRESS MGMT (DEWD 1001). After performing an Expanded Search with a return of multiple records list, the Print option from the menu bar does not function.

R - 184 - 00

ENV ATT CODE (ENAC) MATERIAL ITEM (DENB (1001). The hover labels for the More down arrow key and the Previous Up arrow key do not display. However, they function properly.

R - 218 - 00

RECOVERED MATERIAL CONTENT GROUP, AGENCY REGULATORY MGMT (DENE1101). On occasion, after adding a regulatory agency and exiting back to the Rcvrd Mtrl Cntnt Grp Agency Rgltn Mgmt Screen, the first line in the list box is blank. The RMC Grp Name and ENAC are displayed. Highlighting and selecting the blank line will take you to the Rcvrd Mtrl Cntnt Grp Agency Regltn Details screen, the RMC Grp Name and ENAC are blank and the Regulatory Agency is grayed out. The Program Status line displays "AGENCY_RECOVERED_MTRL_CNTNT_GRP was not found'. Canceling out of this screen will correct the line order in the List box.

R - 258 - 00

RCVRD MTRL CNTNT GRP AGENCY REGLTN DTLS (DENE 1101). Jim was allowed to enter greater than 100% in all boxes of this screen. Should not be able to enter percentages greater than 100%.

INVENTORY

RT - 035 - 00

CHEMICAL INVENTORY INQUIRY WINDOW (DEVF 1001). Using the Up arrow on the Chemical Inventory Inquiry window is significantly slower than using the down arrow. The Down arrow takes between 3-5 seconds to pop the next group up, but the Up arrow takes 16-18 seconds to pop the previous group back up. This appears to operate this same way in both the QA and Production regions. Please look at the query for the Up and see if it can be optimized. This is outside of our acceptable range for processing times, and even though this is Build 1 capability (and is the same as currently in production), if we can improve this, I would like to.

COMPLIANCE

INVENTORY

R-093-98

PRINT FUNCTION - CHEMICAL INVENTORY INQUIRY SCREENS. The print function for the Chemical Inventory Inquiry screens have the Begin and End date grayed out so they can't be used.

R-096-98

LOCAL INVENTORY UPDATE USING HMIS/MSDS NUMBER NOT RECORDED IN ERLS. When attempting to do a Local Inventory Update using an HMIS MSDS Number that has not yet been record in ERLS, I get an error message saying the "MSDS_INFO was not found". I used HMIS MSDS number BYNZC, which is valid in HMIS. ERLS should have accepted this Local Inventory Update with HMIS MSDS Number BYNZC, and then accessed HMIS to pull in the data related to this MSDS, including the NSN/LSN.

R-097-98

CLEARING THE CHEMICAL INVENTORY INQUIRY SCREEN. Something is not getting cleared on the Chemical Inventory Inquiry screen for print jobs. I selected Ft Lewis/UADB/STG for 9-25-1998. I then selected just the Installation (Ft Lewis). This clears the data on the screen correctly. I entered through the expanded search the date range 09-25-1998 to 09-25-1998 and received the correct data back on the screen. I then selected Function/Print, but the print dialog box indicated there were only 2 records (this is what was returned with my original

query) and the print preview only shows 2 records. I then hit CLEAR and tried the same query, with the same valid screen data and the same 2 records in the print report. I had to leave the screen and re-enter, enter in my data, before the correct data appeared in the print report. Need to clear print area as well as screen.

R-105-98
DIALOG BOX FOR LOCATION MSDS INQUIRY PRINT. Still not getting an intermediary screen for the Location MSDS Inquiry Print. SCR 0D2005 identified the requirement for this dialog box that will allow the user to limit their print. We also want this dialog box to include a WARNING that the user should never choose to print the entire list.

R - 245 - 00
LOCATION MSDS EXPANDED SEARCH (DEVF1201). The Expanded Search function takes an excessive amount of time to return data. On two occasions the response times were 1 Min and 20 sec. On another occasion the information was returned in 96 sec. and a forth was returned in 30 sec.

ITEMS

R-049-98
UP/DOWN ARROWS ON MATERIAL ITEM COMPONENT SCREENS. The up/down arrows in the Material Item Component screens are being activated with only one record. When more than one record is present, the up/down arrow hides/ shows the first record.

R-106-98
MSDS INFORMATION MANAGEMENT SCREEN. Not clearing the HCC Field when CLEAR button is used between MSDS entries.

R-121-98
EXPANDED SEARCH - MSDS MATERIAL ITEM MGMT. The expanded search for MSDS Material Item Mgmt does not work properly. It is only searching on FSC and not the full NSN. When you enter a complete NSN that is already in ERLS, and then click List, you are taken to the first NSN with that FSC instead of directly to the entered NSN. Note that the expanded search for Local Stock Numbers does work properly.

RT - 121 - 00
ENVIRONMENTAL ALTERNATIVES (DENS 1001). This window should have a Print capability for the Assigned Stock number list.

R - 212 - 00
MATERIEL ITEM MGMT (DENI 1001). When a user is trying to delete a Materiel Item that has relationships, the system returns an Oracle system error (Status = RE) instead of a nice ERLS error. We should return a user friendly message telling them they are trying to delete a Materiel Item with Relationships (I used NSN 7520-01-386-3670).

R - 249 - 00
MATERIAL ITEM MGMT (DENI 1001). After using the Alt I for the FIND button, other Alt-keystrokes will not work on the Material Item Mgmt window (Ait-D for Delete, Alt-R for Clear, Alt-X for Exit). If the user goes to another window using the icons, and then returns to this window, the Ait-keystroke for these keys does work. This may be a current restriction of the software, but we would like to research it to determine if there is any resolution.

R-032-98

UNPLANNED RELEASE PRODUCT STORAGE LOCATION - MSDS RECORD SORTING. ERLS is still displaying MSDS records with their earliest (oldest) Balance Dates for each Storage Location. It should display the latest (newest) Balance Dates so that the latest On-Hand Quantities prior to the release/spill are shown.

R-068-98

UNPLANNED RELEASE REPORT FORMAT PROBLEMS. The Unplanned Release Report has some format problems.

1. In the header, the word "to" should be "for".
2. The amount of space allocated on the printed report is not enough for the amount of space that is allocated in the database for the Location Text, Incident Cause, Environmental Impact, Injury Description, Comments, and Descriptive Text.
3. Descriptive Text is picked up from the Mitigation Action, but there is also a field on the form for Mitigation Description. Shouldn't this be where the Descriptive Text is displayed. There shouldn't be two fields.
4. Only one mitigation action is displayed, even when more are entered into the database.
5. All of the 5 test fields are taken from data entered on the screen DEUN1001. Buttons for the same fields are also present on DEUR1001, but are not printed. Why have the second set of data entered?

R-069-98

PRINTING AN UNPLANNED RELEASE. The only way to print an Unplanned Release is to select the specific report. If I enter a date range or if I try to print all by hitting the Print button, I get an error that the "application tried to open a GUI report work database that does not exist; CANAMGUE. MDB - please contact support". There is a file with that name in ERLS director.

R-088-98

UNPLANNED RELEASE PRINT SCREENS. In Unplanned Release Print screens, continue to get the error from Report Composer with the message: The application tried to open a GUI report work database that does not exist. CANAMGUI.MDB - please contact support.

R-112-98

UNPLANNED RELEASE CANCELL BUTTON. Cancel button is not operating correctly for Unplanned Release. For all the buttons off the Unplanned Release screen (DEUN1001) including Incident Cause, Environmental Impact, Comments, Injury Description, and Location, the system works this way: If I CLEAR already entered data and then hit CANCEL, when I go right back in to that same button, the data is gone. It appears that CANCEL really saved the change. If I hit REFRESH, the missing data will re-appear. If I exit out and go back into the screens, the missing data will reappear. However, if I hit Modify while the missing data is gone, it will be updated without the data. This only works this way with CLEAR, so that if I enter data and then hit CANCEL and go right back in, the data is not there.

R-114-98

UNPLANNED RELEASE PRODUCT ADD SCREEN. On the Unplanned Release Product Add (NonStorage) screen, you should be retained to the Unplanned Release Product screen after clicking on the Add button to add a new product, but currently are not. Also, on the Unplanned Release Action Add screen you should be returned to the Unplanned Release Action screen after clicking on the Add button to add a new mitigation action, but currently you are not.

R-004-99

REPORTABLE QUANTITY INQUIRY. Clicking on a record on Reportable Quantity Inquiry screen 1 is supposed

to bring up information on Reportable Quantity Inquiry screen 2 if there are any reportable chemicals for the MSDS. The information is supposed to tell you how many of the items would have to be spilled or released in order for reporting requirements to be triggered based upon the RQ. We are getting missing and incorrect data for Reportable Quantity Inquiry screen 2.

REPORTS

R-094-98

CHEMICAL BASELINE REPORTING PERIOD. The Chemical Baseline printed report does not contain the Reporting period it covers. Add the statement: Reporting Period From January 1 to December 31, YYYY, with the appropriate year for any report that is generated for a previous year. For Chemical Baseline printed reports that are generated for the current year, the statement should read: Reporting Period: From January 1 to (insert current Month and Day), YYYY, with the current year listed.

R-109-98

CHEMICAL BALANCE REPORT. When building a Chemical Balance for the first time (for a previous year), you must do a two-step operation to see the report. Build will only build the report. The only notification you receive that the Build completed is a message on the message bar that the "requested action has been completed". The user has to see this message and realize that they now must click on the Display button to see the report. Should either be invisible to the user (I.e., automatically displayed for them-this would be preferred) or it should return with a message window that gives them greater visibility that the build has completed and an option to display it should be available on the message window. (This would make it more like the way Build works for the Tier II reports).

R-110-98

CHEMICAL BALANCE REPORT PRINTING. After printing a Chemical Balance report I am returned to an inactive main menu. I must first click on the title bar of the window before I can do anything else.

R - 250 - 00

TIER II REPORT (DERT 1001). Was able to pull and review a TIER II report, however after viewing all the records (by using the NEXT record button) I attempted to go back to the beginning of the records by hitting PREVIOUS button. The PREVIOUS button was selected by the mouse, when I clicked on the PREVOUS button continuously prior to the screen changing, the data within the Tier II report would disappear. A message on the status line would read "No Records Selected". Selecting the Previous button to quickly causes the TIER II data to disappear.

R - 001 - 01

ACQUISITION RCRA REPORT (DERA 1001) and REQUISITION RCRA REPORT (DERQ 1001). Exporting the report data to a spreadsheet or word document loses some of the secondary header information. Need to provide the user with a complete downloaded version either by moving the missing header data to the body or by creating a new option for a "downloadable" version of the report.

SUBSTANCES

R-012-99

RADIOACTIVE COMPONENT. For radioactive MSDSs, ERLS currently derives the Radioactive Component Name from the Product Identity in the HMIS Article With No MSDS table, and ERLS derives the Radioactive Component Description from the Article Text1 and Article Text2 that are also in the Article With No MSDS table.

Although this radioactive component data is currently mandatory for radioactive MSDSs in ERLS, it should be made optional. There is no true radioactive component data in HMIS in the sense of what ERLS is looking for. This is causing all radioactive MSDSs to reject in ERLS with a "Regulated Component(s) Not Found" message. Do not remove the radioactive component logic at this time, but do make it optional. It should not be required when adding a radioactive MSDS record to ERLS.

R-034-99
UP/DOWN ARROWS. When testing SCR OD2002 (Chemical Management Function) to verify the up/down a r-rows I found that they are not functioning properly. For example, when I added a Chemical family it activated the down arrow. Then when I clicked on the "down arrow" the list contained only one item and the arrows were both disabled.

R-035-99
ISOTOPE AUTHORIZATION. On the Isotope Authorization screen I added enough items to the Authorized List to activate the arrow buttons. I had to exit the screen and come back in to activate the down arrow. I clicked on the down arrow and the up arrow did not activate. The down arrow on the Installation dropdown in the Details box is active, but the up arrow will not activate after clicking on the down arrow.

R - 229 - 00
COMPLIANCE, SUBSTANCES (DESF1001). While trying to remove a chemical from a chemical family per the test plan case V-85. The system generated an error screen (see attached).

POLLUTION PREVENTION (P2)

ACQUISITION MGMT

R - 198 - 00
ACQUISITION MGMT, FAS ACQUISITION CONVERTED EROR MGMT (DEAF 1001). Acquisition Management, FAS Acquisition Converted Error Mgmt. - When performing an expanded search by Activity, and returning the items in Activity order, the search does not always return the correct number of items to the user. Items are sometimes missing from the list. Other times, the list returns the correct number of items, but does not overlap the last item from the previous group with the first item of the new group. In these instances, there are 2 items being carried over from the previous group of data, rather than 1 item being carried over from the previous group of data.

R - 234 - 00
CONTRACTS/CONTRACTING ACTIVITY LIST (DEAR1001). When a user goes to the Contracting Activity List from the Contracts window with data (using the house icon), when they select Cancel instead of another activity, they are correctly returned back to the Contracts window. However the former activity code and name are deleted, the PIIN information is grayed out and they are no longer able to return to the Contracts list (if that was available before). Looks like the Cancel button is clearing data that it should not. The user still has the option to return back to the Contracting activity list to select another or the original activity again, so that is why the designation is Routine.

REQUISITION MGMT

RT - 184 - 00
REQUISITION MANAGEMENT (DEQR 1001). This screen needs an Expanded Search capability. Search abilities should be provided by NSN or LSN, Document ID, or Date Range.

R - 210 - 00

ENV ATTRIBUTE CONVERTED ERROR MGMT (DEAC 1001). Test Case 416. After performing an Expanded Search and clicking on the More Records down button the last record of previous block of data is not the first record of the current block of data. Clicked on the More Records up button. The More Records down button does not 'deactivate' and the records in the block of data are not the same as in the original block after search was performed. There is no indication of where the user is within the data retrieved from the search process.

TABLES

R - 252 - 00

PREVENTION MENU (DEXP 1001) AND MULTIPLE SUB WINDOWS. Hq DLA said to change the name of "Acquisition Measure Of Merit" and "Requisition Measure Of Merit" report titles to "Acquisition RCRA Rpt" and "Requisition RCRA Rpt". This will require changing the report titles on the main Prevention menu, its sub menus, and help screens. See attached screen prints for identification of changes.

OTHER

OTHER

RT - 012 - 00

HELP FILES

1. When I first sign-on to ERLS, the "Help" menu items did not work. I got error messages stating that the help files could not be found. However, when I signed-off ERLS and then signed back on, the "Help" menu items did work OK. I should not have to sign-off and then back on just to get the "Help" menus to work. It appears that the ERLS cannot find its own help files on the first sign-on, but can locate them on the second sign-on. Terry, this is one we neglected to mention in our phone conversation.

2. No Help screens, either window or element. We'll provide an updated Help file.

R - 032 - 00

ALL WINDOWS. Up and Down arrow pushbuttons. F1 help screens are titled Help "BIT00012 and 36" Pushbutton. Rename the help screens "Help for Up/Down Arrows" as appropriate.

R - 227 - 00

MULTIPLE WINDOWS. When a user first enters some windows the mouse pointer is an hourglass until the user moves the mouse. Then the pointer changes back to an arrow (or whatever the pointer is for the user). This may lead some users to believe the system is "doing something" when it is not. The windows where the hourglass appears are: DODAAC Mgt (after OK is selected) Product Category (after OK is selected), ENAC Mgt (after OK is selected), ENAC Materiel Item (after selecting the icon), Contracting Activity List (after going to Contracts and returning to the Contracting Activity List using the icon), BOSS Requisition errors (after OK), FLIS MM errors (after OK). Please check all windows for this condition after the More Records window displays (since some windows may not have enough records to trigger the dialog yet)

R - 246 - 00

MULTIPLE WINDOWS. Change all of the Finds to an underscore on "I". Following are the screens that should be changed:

Windows where the "F" in Find is underlined. Requisition Baseline Inquiry (DEQG 1001), Unplanned Release (DEUN 1001), Materiel Item Management (DENI 1001), and Chemical Management (DESC 1001).

Windows where there is no underline for Find. Location MSDS Inquiry (DEVF 1201) FIXED, Reportable Quantity Inquiry (DERR 1001), and MSDS Management (DEMM 1001).

Window where the "N" in Find is underlined: Item Environmental Alternatives Management (DENS 1001).

HMIS

R-117-98
HMIS DATA CONVERSION. When converting HMIS data, if the chemical has less than 0.01 percentage in HMIS, it appears that ERLS treats this like receiving no percentage from HMIS. A default value for the chemical percentage is being assigned.   For example, MSDS DTSKK had a CAS 7440-38-2 that had 0.003 in the Pe r-centage Text field in HMIS. In ERLS this was assigned a percentage o 7.72 (the remainder between the total of the known chemicals and 100%) ERLS should recognize that it got a percentage from HMIS (even though we would only be showing 0.00 as the percentage) and not go into the default logic.

MISC.

R-032-99
ERROR MESSAGES. SCR 0D2002 required that ERLS provide user-friendly error messages when encounte r-ing Referential Integrity errors. Although this is done in most cases, there are still four instances where cryptic Referential Integrity error messages occur. These need to be replaced by User Friendly error messages. A t-tempting to delete an Installation, Activity, Function Process, or Service Agency when there are still children a t-tached is the four instances.

MSDS

R-011-99
MSDS DEFAULT VALUES. MSDS BBGLC initially processed into ERLS on Jan 26, 1999 as evidenced by its appearance on the MSDS Notification Management screen with messages indicating ERLS used default values. There are five ingredients in HMIS for this MSDS, four of which have CAS Numbers and percents. However, ERLS only picked up percents for three of those chemical ingredients. CAS 67-64-1 is shown in HMIS with a Percent Text of 42, but is shown in ERLS with a percent of 82. ERLS calculated midpoints for the other three chemicals (ranges) and subtracted from 100 to get 82 percent for CAS 67-64-1. For some reason or another ERLS failed to identify the 42% that was in HMIS for CAS 67-64-1. Possibly this could be related to the fact that percents are now being stored in multiple attributes in HMIS. Both QA and PROD show 42% in ERLS for this CAS.

PRINT

R-002-00
PRINT PROBLEMS FOR SYS ADMIN USER FROM INVENTORY MENU. Function/Print selection is disabled

for Chemical Inventory Inquiry, but should not be. All other Function/Print selections are enabled. ERLS is not allowing printing from the TPQ 80% and PSM Notification print dialog boxes. It should allow printing from these dialog boxes since it allows it for other errors/discrepancies. When printing BOSS Errors, I get a red progress bar indicating that the print job is going to the Crystal Reports window, but then the Crystal Report window never is displayed.   Since a Sys Admin user has the capability to limit the data returned from an inventory inquiry using Expanded Search, and has the capability to limit (by selecting dates) the amount of data printed by means of the print dialog boxes, all Print capabilities should be enabled and function properly. Also needed for Region pe r-sonnel that are assigned Sys Admin access.

RT - 005 - 00
ALL SCREENS. No print icon or print capability.   Prints for all windows will be added at once-- probably in March 2000.

WINDOW

R-028-99
BUILD ONE ENHANCEMENTS. Reference SCR 0D2002. Build One Enhancements had a requirement of all occurrences of "+" buttons to be converted to up/down arrows. Although most have in fact been converted, there are a number of windows still requiring this conversion.

The following windows still have a "+" button which needs to be replaced by both up and down arrows:
  - Authorized Isotopes by Installation

The following windows have a down arrow which has replaced the "+" button, but still need up arrows:
  - Isotope Management
  - Chemical Balance Report
  - Transfer Installation
  - Transfer Activity (2 occurrences)

The following windows have blocks for the up and down arrows, but the arrows themselves still need to be added (the "+" buttons have been removed):
  - Activity Management
  - Unplanned Release Product
